PCT No. PCT/SE80/00138 Sec. 371 Date Jan. 13, 1981 Sec. 102(e) Date Jan. 13, 1981 PCT Filed May 13, 1980 PCT Pub. No. WO80/02508 PCT Pub. Date Nov. 27, 1980. A pulling apparatus has a stand (1) with vertical legs (2) which guide a weight magazine (7) for vertical movement. The magazine, which is a bottomless basket with a row of holes (12) in the side surfaces, is intended for weights (14) in a stack. These weights are provided with yoke-shaped components (15) which serve on the one hand as guides between the weights, and on the other hand as spacers. The distance between the magazine holes corresponds to the spacing between the respective weights so that a lifting plate (13) can be introduced into the hole between the weights.
