Infraröd strålare

Sammandrag från **WO9607489**

In a method of improving the function of a mobile infrared paint curing device (1-5), preferably for car repair shops, including a curing head (5) with an array of IR panels (8) for curing by means of IR beams, air is blown from the curing head obliquely inwards towards the object to be cured, and the supply of IR beams and air to the object is controlled by a common control system.
